Humanised anti-Fas designed heavy chain Heu 1 protein.

```
apoptosis in cells with a normal system, by inhibiting binding between Fas and its ligand. The products of the invention have anti-inflammatory, anti-anemic, antidiabetic, anti-allergic, anti-arthritic, antiviral, immunosuppressive, thyromimetic, antirheumatic, nephrotropic, antinifertility, neuroprotective, antirheumatic, nephrotropic, antinifertility, neuroprotective, antistensoclerotic, cardiant and hepatropic activity. (I) induce apotation of ligand to call surface Fas or inhibit it by competitive inhibition of ligand binding. (I) are used to treat and/or prevent diseases associated with the Fas/Fas ligand system, especially systemic lupus erythematosus, Hashimoto disease, rheumatoid arthritis, graft versus host disease, Sjorgen's syndrome, pernicious or hypoplastic anemia, Addison's disease, scleroderma, Goodpasture syndrome, Corbn's disease, autoimmune hemolytic anemia, sterility, myasthenia gravis, antitice, and all and a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 dependent diabetes mellitus, allergy, arteriosclerosis, myocarditis, cardiomyopathy, glomerulonephritis, hepatitis (fulminant, chronic, viral leb. C or D) or alcoholic), and transplant rejection. (1) selectively inhibit apoptosis in normal cells but selectively induce it in abnormal cells. They bind to both human and murine Fas, so can be evaluated in murine disease models. (1) act on the active site of Fas, i.e. they mimic the native ligand, do not induce liver disease, and have reduced risk of inducing a human anti-murine antibody response. This sequence represents a humanised anti-Fas antibody heavy chain construct designated Heu 2 which is described in the method of the invention.

This invention describes a novel humanized anti-Fas antibody-like molecule (1) that, induces apoptosis in cells with an abnormal Fas/Fas (1 igand system, by binding to Fas on the cell surface, and prevents apoptosis in cells with a normal system, by inhibiting binding between Fas and its ligand. The products of the invention have anti-inflammatory, anti-anemic, antidiabetic, anti-allergic, anti-arthritic, antiviral, immunosuppressive, thyromimetic, anti-heumatic, nephrotropical, immunosuppressive, thyromimetic, anti-heumatic, nephrotropical, immunosuppressive, thyromimetic, anti-heumatic, nephrotropic, antidifertility, neuroprotective, anti-heumatic, nephrotropic, antidifertility, neuroprotective, contining to cell surface Fas or inhibit it by competitive inhibition of ligand binding. (1) are used to treat and/or prevent consenses associated with the Fas/Fas ligand system, especially systemic specials with the Fas/Fas ligand system, especially systemic consenses associated with the Fas/Fas ligand system, especially systemic consenses, sjorgen's syndrome, pernicious or hypoplastic versus host disease, soleroderm's Goodpasture syndrome, Conh's disease, autoimmune hemolytic anemia, sterility myasthenia gravis, multiple sclerosis, Basedow's disease, thrombopenia purpura, insulin dependent diabetes mellitus, allergy, arteriosclerosis, myocarditis, cardiomyopathy, glomerulonephritis, hepatitis (fulminat, chronic, is cardiomyopathy, glomerulonephritis, hepatitis (fulminat, chronic, is unhibit apptoss in normal cells but selectively induce it in abnormal cells. They bind to both human and murine Fas, so can be evaluated in murine disease models. (I) act on the active site of Fas, i.e. they minic contine disease models. (I) act on the active site of Fas, i.e. they minic is described anti-enalibody reavy chain construct designated Heu I with the method of the invention.
                                      Fas; antibody; human; anti-inflammatory; anti-anemic; antidiabetic; anti-allergic; anti-arthritic; antiviral; immunomodulatory; cardiant; dermatological; immunosuppressive; thyromimetic; antirheumatic; anti-Fas; nephrotropic; antiinfertility; neuroprotective; antiarteriosclerotic; hepartotropic; humanized; apoptosis; systemic lupus erythematosus; Hashimoto disease; rheumatoid arthritis; graft versus host disease; Sjorgen's syndrome; anemia; Addison's disease; scleroderma; sterility; Goodpasture syndrome; Crohn's disease; sterility; myasthenia gravis; multiple solerosis; Basedow's disease; thrombopenia purpura; allergy; insulin dependent diabetes mellitus; arteriosclerosis; myocarditis; cardiomyopathy; glomerulonephritis; hepatitis; transplant rejection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New humanized anti-Fas antibody, useful for treating or preventing e.g. inflammatory or autoimmune disease, induces apoptosis selectively in cells with abnormal Fas-Fas ligand systems
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;

This is the amino acid sequence of the VD type humanised heavy chain of murine anti-human Fas monoclonal antibody HFB7A. E. coll pyELTA62 SANK 7397 harbors plasmid pyERSTA62 carrying a fusion fragment of the humanised VD type HFB7A heavy chain and DNA encoding human IgGl constant region (see AAV70079), and is deposited as FERM BP-6074 (Claimed). The invention provides methods for producing humanised antibodies by culturing host cells. Humanised versions of HFB7A (see AAW83031-37), like native HFB7A, are capable of inducing apoptosis in abnormal cells expressing Fas, and of antibodies are used to evaluate, in animal models, treatments of antibodies are used to evaluate, in animal models, treatments of alseases that involve Fas/Fas ligand interactions, and also to treat such diseases, including autoimmune disease (e.g. systemic lupus erythematosus, Hashimoto's disease, graft versus host disease, sleroderma, Sjoren syndrome, Crohn's disease, thromatoid arthritis, autoimmune heamolytic anaemia, Sterility, myasthenia gravis, multiple sclerosis, Basedow's disease, thromatopenia purpura and insulin-dependent diabeters), allengies, aropy, arteriosclerosis, multiple sclerosis, Basedow's disease, thromatograftis, nyopolastic myocarditis, cardiomyopathy, glomecular nephritis, hypoplastic maemia, hepatitis, AIDS and transplant rejection (all claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GQGLEWMGEIDPSDSYTNYNQKFKGRVTITRDTSTSTAYMELSSLRSEDTAVYCARNRD 120

The invention relates to compositions for the prevention or treatment or diseases caused by an abnormality in the Fas/Fas ligand system containing an anti-Fas antibody as the active component. The anti-Fas antibody is either the murine anti-human Fas monoclonal antibody HFETA, or a humanised version of HFETA containing identical CDRs (complementarity determining regions) to antibody HFETA, via its interaction with Fas, the antibody of the invention acts as a modulator of apoptosis. The compositions of the invention may therefore be used in the treatment or prevention of conditions such as autofimmune diseases, allery, atopy, arteriosclerosis, myocarditis, cardiomyopathy, glomerulonephritis, aplastic anaemia (panmyelophthisis), hepatitis, AIDS represent the heavy chains (or fragments thereof) of various humanised HFETA-derived anti-Fas antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          murine; humanised antibody; complementarity determining region; CDR; human Fas; Fas ligand; apoptosis modulator; programmed cell death; autoimmune disease; allergy; atopy; arteriosclerosis; myocarditis; cardiomyopathy; glomerulonephritis; aplastic anaemia; panmyelophthisis; hepatitis; AIDS; graft rejection; heavy chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Preventive or treating agent for the diseases caused by an abnormality in the Fas/Fas ligand system e.g. autoimmune diseases, contains

into the control of that, induces apoptosis in cells with an abnormal Fas/Fas apoptosis in cells with an abnormal Fas/Fas apoptosis in cells with an abnormal Fas/Fas apoptosis in cells with an open by binding to Fas on the cell surface, and prevents apoptosis in cells with a normal system, by inhibiting binding between Fas and its ligand. The products of the invention have anti-inflammatory, anti-aremic, antidiabetic, anti-allergic, anti-arthritic, antiviral, immunomodulatory, dermatological, immunosuppressive, thyromimetic, artirateriosolerotic, cardiant and hepatropic activity. (I) induce apoptosis by binding to cells usrface Fas or inhibit it by competitive inhibition of ligand binding. (I) are used to treat and/or prevent diseases associated with the Fas/Fas ligand system, especially systemic lupus erythematosus, Hashimoto disease, rheumatoid arthritis, graft versus host disease, Slorgen's syndrome, pernicious or hypoplastic versus host disease, soleroderma, Goodpasture syndrome, Crohn's disease, autoimmune hemolytic anemia, Goodpasture syndrome, Crohn's disease, autoimmune hemolytic anemia, sterility, myasthenia gravis, allergy, almerulonephritis, hepatitis (fulminant, chronic, viral Gependent diabetes mellitus, allergy, arteriosclerosis, myocarditis, cardiomyopathy, glomerulonephritis, hepatitis (fulminant, chronic, viral (B. C or D) or alcoholic), and transplant rejection. (I) selectively inhibit apoptosis in normal cells but selectively induce it in abnormal cells. They bind to both human and murine Fas, so can be evaluated in murine disease models. (I) act on the active site of Fas, i.e. they minic murine disease models. (I) act on the active site of Fas, i.e. they minic inducing a human anti-murine antibody response. This sequence represents a humanised anti-Fas antibody HEPA designed heavy chain which is used in the method described in the invention.
                                                                                                                                                               New humanized anti-Fas antibody, useful for treating or preventing e. inflammatory or autoimmune disease, induces apoptosis selectively in
                                                                                                                                                                                                                                                                                                                                        This invention describes a novel humanized anti-Fas antibody-like

```
The invention relates to a compound which comprises a target cell-specific portion, comprising an humanised monoclonal antibody, having specificity for polymorphic epithelial mucin (PEM) or its antigen binding fragment and a cytotoxic portion having endonucleolytic activity, exemplified by AAM52154-AAM52168 and encoded by ABA02682-ABA02728. The compound has cytostatic activity useful for treating cancer and acting as a potential inducer of apoptosis.
                                                                                                                                 Humanised monoclonal antibody; polymorphic epithelial mucin; PEMI;
cytotoxic; endonuclease; DNase I; human; cytostatic; cancer; apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GQGLEWMGEIDPSDSYTNYNQKFKGRVTITRDTSTSTAYMELSSLRSEDTAVYYCARNRD 120

The compound has cytostatic activity useful for treating cancer and acting as a potential inducer of apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                 Humanised monoclonal antibody; polymorphic epithelial mucin; PEM1;
cytotoxic; endonuclease; DNase I; human; cytostatic; cancer; apoptosis.

having specificity for polymorphic epithelial mucin (PEM) or its antigen binding fragment and a cytotoxic portion having endonucleolytic activity, exemplified by AAM52154-AAM52168 and encoded by ABA025682-ABA02728. The compound has cytostatic activity useful for treating cancer and acting as a potential inducer of apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Humanised monoclonal antibody; polymorphic epithelial mucin; PEM1;
cytotoxic; endonuclease; DNase I; human; cytostatic; cancer; apoptosis.

                                                                                                                                                                                                    The invention relates to a compound which comprises a target cell-specific portion, comprising an humanised monoclonal antibody, having specificity for polymorphic epithelial mucin (PEM) or its antigen binding fragment and a cytocoxic portion having endonucleolytic activity, exemplified by AAM52154-ABM52168 and encoded by ABA02682-ABA02728. The compound has cytostatic activity useful for treating cancer and acting as a potential inducer of apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Humanised monoclonal antibody; polymorphic epithelial mucin; PEM1; cytotoxic; endonuclease; DNase I; human; cytostatic; cancer; apoptosis.

                                                                                                                                                                                                                                                                                            cell-specific portion, comprising an humanised monoclonal antibody, having specificity for polymorphic epithelial mucin (PEM) or its antigen binding fragment and a cytoctoxic portion having endonucleolytic activity, exemplified by AAM52154-AAM52168 and encoded by ABA02682-ABA02728. The compound has cytostatic activity useful for treating cancer and acting as a potential inducer of apoptosis.

Patent No. 6133426
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Genzalez, Tania R.
APPLICANT: Leong, Steven R.
APPLICANT: Presta, Leonard G.
TITLE OF INVENTION: Antibody Fragment-Polymer Conjugates and
TITLE OF INVENTION: Humanized Anti-IL-8 Monoclonal Antibodies
NUMBER OF SEQUENCES: 72
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                             Length 452;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A; Introns: 99/1; 111/1; 221/1
C; Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kap hain disulfide bonds. In some cases, such as IgA and IgM, the subunits associate into la C; Superfamily: immunoglobulin C region; immunoglobulin homology
C; Keywords: duplication; glycoprotein; heterotetramer; immunoglobulin
F; 20-85, Domain: immunoglobulin homology <IM1>
                                                                                                                                                       A) Note: the sequence was determined from the germline gene

C. Species: Sus scrofa domestica (domestic pig)
C. Date: 21-Feb-1997 #sequence_revision 21-Feb-1997 #text_change 21-Jan-2000
C. Accession: 147160
J. Immunol. 153, 3565-3573, 1994
A. Title: Five putative subclasses of swine IgG identified from the CDNA seq
A. Reference number: 147158; MUID: 95015845
A. Reference number: 147158; MUID: 95015845
A. Redesion: 147160
A. Status: preliminary; translated from GB/EMBL/DDBJ
A. Rolecule type: mRNA
A. Residues: 1-328 < KAC>
A. Residues: 1-328 < KAC>
A. Cross references: EMBL: U03780; NID: 9433125; PIDN: AAA52218.1; PID: 9433126
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   380
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  260

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Proc. Natl. Acad. Sci. U.S.A. 79:2623-2627(1982).

ALERNATURE PRODUCTS: CELL LINES PRODUCING IGG CONTAIN TWO MRNA SPECIES FOR IG GAMMA CHAINS. THE MAJOR SPECIES ENCODES SECRETED GAMMA CHAINS. A LESS ABUNDANT SPECIES APPEARS TO ENCODE MEMBRANE-BOUND CHAINS. IN THAT IT CONTAINS AN ALTERNATIVE 3' END, ENCODED IN SEPARATE EXONS, THAT IS HOMOLOGOUS WITH THE MEMBRANE-BOUND SEGMENT OF MU CHAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
